- Handheld Mode: Set the app to Balanced Capture Mode. It has a 5-second capture time so it's important to avoid moving the phone during this period.
- For Tripod Use: Choose **Pro Capture Mode**. It produces the highest quality results, but complete stillness is required.

#### **SHUTTER DELAY**

- Shutter delay provides a brief pause, reducing camera shake for sharper images.
- You can choose a delay between 0 to 8 seconds.
- For handheld shooting, we recommend a 4-second delay to give you time to steady yourself before capturing.
